

Sophia University Junior College Division 2022 FD Lecture

Diversity in Human Sexual Development

Kyoko Yokoyama

- Professor, Department of Psychology, Faculty of Human Sciences, Sophia University
- Director of Sophia University Health and Wellbeing Center
- Director of Office for the Promotion of Diversity, Sophia School Corporation

It is now widely understood that human sexual development is more diverse than we learned in school. The idea that chromosome XX is female and XY is male is now said to be nothing more than a socio-biological stereotype.

First of all, I would like to talk about the diversity of the human body's sexuality in the context of Differences of Sex Development (DSD).

Next, I would like to consider the relationship between DSD and LGBTQ+. The arguments of each side sometimes seem to be exactly opposed to each other, but I would like to present their claims as best I can.

Thirdly, regarding LGBTQ+, the difficulties and diversity of life have been covered in various media outlets, and I would like to touch on them here as well.

Finally, I hope we can think together about what we can do for our friends as we live together and interact with each other.

September 21 (Wed.) 11:00-12:30

For all the faculty and staff members of SUJCD

How to participate : Zoom ID: 968 230 8988

Passcode: 281088

* The lecture will be given in Japanese, but English materials will also be distributed.
